badgemaker

VAR
series

badgemaker basic offers you all the functionalities that are required for ID card personalization. It provides you handy tools for card layout design, such as automatic layout selection, and includes a professional Access database for image and data storage. Adding barcodes or encoding magstripes is easy, making badgemaker basic well suitable to issue access & control and identification cards.

badgemaker pro enables you to issue IDs in a professional manner. Pro includes modern techniques, such as high quality image support, automatic import-export functions, batch printing, encoding support (barcode, magstripe, contact and contactless smart card). Despite the advanced features, layout design, card printing and data management remains an easy job in badgemaker pro.

badgemaker expert is the top of the bill in ID personalization systems. Expert has been designed especially for the more demanding user and includes ODBC to make use of available data sources, biometric support and offers card printing and encoding in one single process. All common forms of encoding, including contactless smart card encoding are supported in badgemaker expert.
